

i-Collector, world's first fully automated item picking system

Reduces your operational costs in the picking zone with 40 to 80%

The i-Collector is a patented intelligent dynamic item-order picking system which can be integrated in both new or existing situations. Extreme suitable for E-Commerce meaning immediate availability of the products, short delivery and

high service quality. The i-Collector reduces your operational costs in the picking zone with 40 to 80%, Non Movements and Localization, Non Picking or Counting mistakes or Backorders, High Speed and faster time to Ship.

Pharmaceutics & Cosmetics

Laboratories as well as distributors need a 100% reliable system and global traceability of the logistic flow.

Office Supply & Multimedia

The logistic of office supply has its focus on productivity, face to short delays and important daily volume.

The i-Collector:
*world's first
fully automated
e-commerce
item picking
system*

Food & Groceries

The i-Collector offers a fast and reliable way of buffering before packaging it can supply any mix of products as needed.

Industrial & Assembly supply

Professionals of the hardware, tools and industrial supplies want detailed distribution for deliveries within 24 hours for all customers.

Introduction at
Logistica 2012

Hall 9, **B089**

Nominated
for the
**Logistica
Award 2012**

- Goods are collected, stored and delivered automatically into the delivery box
- Brings out complete orders in one operation
- Brings in & out goods mixed or by batch

The i-Collector, world's first fully automated item-order picking system

I-Collector Europe like to have the opportunity to introduce the i-Collector to the market. The i-Collector is a patented intelligent dynamic item-order picking system which can be integrated in both new or existing situations. Extreme suitable for E-Commerce meaning immediate availability of the products, short delivery and high service quality. Despite the apparent high degree of automation, order picking is still one of the most time-consuming and labour intensive activities in the warehouse. The i-Collector reduces your operational costs in the picking zone with 40 to 80%, Non Movements and Localization, Non Picking or Counting mistakes or Back-orders, High Speed and faster time to Ship. The i-Collector fully processes the whole order in one operation, Batch-in / Mixed-out or the other way around regardless size, shape or the type of packaging of the item.

This system automatically feeds items as per order requirements to be automatically placed into the delivery totes or boxes and ReadyToShip to customer.

Syntens Innovation Award for the i-Collector concept

Last year, the concept of the i-Collector was awarded as one of the most important innovations for SME's. Out of 100 nominated companies the i-Collector earned a sixth place. The innovation is an initiative of the Dutch innovation centre 'Syntens'. With the many possible applications the jury sees for the i-collector a high potency in a broad market.

With the i-Collector labour-intensive systems have become a thing of the past!

Nominates for Logistica Award 2012

An expert jury for the Logistica Award 2012, nominated three innovations for this award out of 18 entries. With the nomination for the i-Collector, I-Collector Europe is proud to be one of them.

The jury was very impressed by the original and simple solution for compact storage and order picking which i-Collector Europe offers with this new concept. "The solution can potentially lead to large savings in space in the warehouse, emissions and costs."

The key distinguishing features of the i-Collector

- The i-Collector fully processes the whole order in one operation, Batch-in / Mixed-out or the other way around regardless size, shape or the type of packaging of the item
- Automatic supply on the input side with automatic item picking on the output side. Remarkable is that it would still be very productive with manual labour input!
- The system is built using standard industry components resulting in a Green- Line Automation, Low Cost of Ownership and a high ROI.
- The i-Collector provides a high capacity in a compact unit ensuring maximum space utilisation, compared with other systems we easily save 40 to 50% floorspace.

Stay tuned for more...

"Remarkable interest for the use of the i-Collector as a fully automated PUP (Pick Up Point) to reduce the cost for the last mile. Stay tuned"
